# ...for sensational eroding results.

Much of what earlier seemed impossible with eroding is now feasible. Due to a new, strong impulse: *IPMtec* (Intelligent Pulse-Modulation). The new generator technology for all ZK machines of the *genius* series. *IPMtec* combines surprising speed with greater precision and even less wear.

A ground-breaking impulse for tool and mould construction, which leaves nothing to be desired when it comes to eroding. Whatever tasks and materials you are involved with in your workshop.
